

WHO WE ARE

We develop and provide virtual reality solutions for mental health professionals to facilitate their treatment plans.

We offer tools for phobias treatments, resources to improve anxiety disorders and pain management, and a set of relaxation environments.

We believe that
people should
not feel
limited by their
minds

ALL THE POSSIBILITIES TO APPLY THE BEST TREATMENT

- + **More than 70 virtual reality environments** and 360° videos that adapt to the needs of each patient.
- + **Session configuration:** Control what the patient experiences during the session.
- + **Real-time reports:** The physiological sensor collects information and records the patient's anxiety.
- + **Online reports:** Evaluate the fluctuations and adaptations that the therapy produces.

THE FIRST VR PLATFORM FOR MENTAL HEALTH

Perfect harmony between the VR Therapy platform and a kit of a state-of-the-art headset and a Bio-feedback sensor makes it as easy as ever to apply VR in the clinical practice.

HOW DOES PSIOUS WORK?

- 1.** The patient is gradually exposed to stressful situations, fully controlled by the Professional integrating relaxation techniques as warranted.
- 2.** The therapist monitors the session via computer and visualizes the physiological response with the galvanic sensor.
- 3.** With that information, the system prepares a customized session report showing the patient's progress.

FROM THE RESEARCHERS TO THE PSYCHOLOGICAL PRACTICE

25 years of scientific studies support the results of this technology for the treatment of multiple disorders.
